

IN THE SPECIFICATION:

Please amend the specification as follows.

On page 2, amend the paragraph starting on line 13 to read:

-- The invention mentioned provides the pharmaceutical composition containing the platinum complex of formula (I) as the active substance

where

A and A', independently of each other, are NH₃ group or the amine or diamine group containing 1 to 18 carbon atoms,

B and B', independently of each other, are the halogen atom, the hydroxyl group or ~~COOR or COOR'~~ -O-C(O)-R or -O-C(O)-R' group where R and R', independently of each other, are hydrogen atom or alkyl, alkenyl, aryl, aralkyl, alkyl amine or alkoxy group containing 1 to 10 carbon atoms or functional derivatives of the groups mentioned, and

X and X', independently of each other, are halogen atom or the monocarboxylate group containing 1 to 20 carbon atoms, or

X and X' together mean the dicarboxylate group containing 2 to 20 carbon atoms,

in a mixture with at least one pharmaceutically acceptable excipient characterized in that it is formed of a granulate with particles smaller than 0.5 mm in size prepared by wet granulation of a mixture of platinum complex of tetravalent platinum of formula (I) wetted by water, at least one neutral saccharide and at least one native and/or modified polysaccharide. — —
